Preamble

The GNU General Public License is a free, copyleft license for software and other kinds of works.

The GNU General Public License is a free, copyleft license for software and other kinds of works.

The licenses for most software and other practical kinds of works are designed to take away your freedom to share and to change the works. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change all versions of a program--to make sure it remains free for all its users. We, the Free Software Foundation, use the GNU General Public License for most of our software; it applies also to any other program that you wish to apply it to, and its authors. You can apply it to your programs, too.

By contrast, the GNU General Public License is intended to guarantee your freedom to share and change all versions of a program--to make sure it remains free for all its users. We, the Free Software Foundation, use the GNU General Public License for most of our software; it applies also to any other program that you wish to apply it to, and its authors. You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (either by unmodified copies or code or can get it if you want to), to modify the software or use pieces of it in new free programs, and to share your modifications with others.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (either by unmodified copies or code or can get it if you want to), to modify the software or use pieces of it in new free programs, and to share your modifications with others.

To protect your rights, we need to make sure that you are free to run the program, to modify the program, to redistribute copies of the program, and to share your modifications with others.

To protect your rights, we need to make sure that you are free to run the program, to modify the program, to redistribute copies of the program, and to share your modifications with others.

For example, if you distribute copies of a program, whether gratis or for a fee, you must pass on to the recipients the same freedoms that you received. You must make sure that they, too, receive the same freedoms. You must make sure that they, too, are given the same rights to copy, distribute and/or modify the program. And you must show them these terms so they know what rights they have.

And you must show them these terms so they know what rights they have.

Developers that use the GNU GPL to copy, distribute and/or modify the program are required to make their modified version available under the same GPL, giving you legal permission to copy, distribute and/or modify it.

Developers that use the GNU GPL to copy, distribute and/or modify the program are required to make their modified version available under the same GPL, giving you legal permission to copy, distribute and/or modify it.

For the developers' and authors' sake, the GNU GPL clearly explains that there is no warranty for this free software. For the users' sake, the GPL requires that modified versions be marked as modified, so that their problems will not be attributed erroneously to authors of previous versions.

Some devices are designed to prevent users from installing or running modified versions of the software inside the device's memory. This is fundamentally incompatible with the principle of the GNU GPL, which is that users have the freedom to change the software. The systematic use of such devices to prevent users from changing the software is most unacceptable. Therefore, we have designed this version of the GNU GPL to protect the freedom of users. For those domains where such problems arise, we stand ready to extend this provision to those domains. Finally, every program is threatened by the possibility of being covered by software patents. States should not allow patents to restrict the free use of software on general-purpose computers, but in those cases where that has happened, the GNU GPL is applied to a free program to protect the freedom of users.

“Additional permissions” are those that are made by making exceptions from one or more requirements of this License, to the extent that those exceptions apply only to particular parts of the Program, or to particular uses of the Program, or to the distribution of copies of the Program, or to the rights to copy, modify, or distribute copies of the Program, or to the rights to use the Program for a particular purpose. Without regard to the additional permissions, the requirements of this License are

When you convey a copy of the Program, you may at your option remove any additional permissions from that copy, or you may add new permissions. You may place additional permissions on material, added by you to a covered work, for which you have or obtain a copyright permission.

Notwithstanding any other terms of this License, you may (if authorized in writing by the copyright owner of that material) supplement the terms of this License with terms which

- Disclaiming warranty or limiting damages differently from the terms of sections 15 and 16 of this License;
- Requiring preservation of certain reasonable legal notices or author attributions in that material or works containing it;
- Prohibiting misrepresentation of the origin of that material, or requiring that modified versions of such material be marked in reasonable ways as different from the original version;
- Limiting the use of that material to certain purposes; or
- Declining to grant a patent right for any process or product made or used in, or by, use of the material; or
